MERIDIAN DOCUMENT INTAKE

QA Execution Report — Timeout and Upload Boundary

FICTIONAL SYNTHETIC TEST MATERIAL — created only for software demonstration; not a real company record.

Document ID: QA-RUN-881 | Test suite: release-2026.10-acceptance | Executed: 2026-10-21

ENVIRONMENT

Release: mdi-2026.10-rc3

Environment: staging configured from the production candidate bundle

Worker timeout in configuration export: 60 seconds

Test operator: Platform QA rotation

TEST QA-TIMEOUT-04 — JOB TIMEOUT

Input: synthetic PDF designed to keep processing active beyond 45 seconds.

Runs: 3

Observed durations: 61.4 seconds; 62.0 seconds; 61.7 seconds.

At 90 seconds after each submission, the job API returned status RETRYING.

Observed UI message in each run: “Processing failed.”

Expected under PRD-42: terminal FAILED state after 45 seconds, no automatic retry, and the approved user-readable timeout message.

Result recorded by QA: FAIL.

TEST QA-UPLOAD-07 — MAXIMUM FILE SIZE

Input: synthetic 75 MB PDF.

Observed response: HTTP 202 Accepted; a processing job was created.

Expected under PRD-42: HTTP 413 before a job is created for any file larger than 50 MB.

Result recorded by QA: FAIL.

SCOPE AND LIMITATIONS

These records describe the three timeout runs and one upload-boundary run listed above. They do not establish behavior for every file type, worker, region, or release. No passing rerun after a fix is attached to this report.

RECOMMENDED FOLLOW-UP

1. Align timeout, retry, and upload-size values with the approved requirement or obtain an approved requirement change.

2. Rerun QA-TIMEOUT-04 and QA-UPLOAD-07 after the change.

3. Capture request IDs, job IDs, actual state transitions, elapsed times, HTTP status, and the rendered UI message.

4. Attach the passing run report to the release approval record.
